

**AMENDMENTS TO THE SPECIFICATION**

**Page 5, Paragraph 1**

[0024] In the exemplary embodiment of FIGS. 1 through 3, exterior limit stop 26 is formed by a cap 26', which is attached to the free end of adjusting screw 18, for example, by being screwed, pressed, glued, plastic-extruded, or attached in some other way. Cap 26' has a radial edge acting as a limit stop surface 24, which can come into contact with spreading element 16.
